

TECHSPHERE PK

Virtual Internship — Batch 3

Web Development Track

WEEK 4

Final Project: Live Website

Difficulty: (5/5)

Mentor: Anees Zafar — CEO & Lead Instructor, TechSphere PK

Contact: techsphere146@gmail.com | +92-344-9669414

Submit via: Google Classroom Assignment

Program: Summer 2026 · 100% Online · 4 Weeks

Tools: VS Code + Chrome + GitHub + Netlify/GitHub Pages

Read all instructions carefully before starting. Submit before the deadline. For questions, use the private comment section on Google Classroom.

WEEK 4 — Final Project: Live Website

Congratulations on making it to the final week! This week you expand your Week 3 landing page into a complete 4-page website AND host it live on the internet for FREE. After this, you will have a real, working website in your portfolio that anyone in the world can visit.

Final Week Topics

- Multi-page website structure: how multiple HTML files link together
- Consistent navigation: same navbar across all pages using relative links
- Design system: keeping fonts, colors, and spacing consistent on every page
- Google PageSpeed Insights: checking and improving your page performance score
- GitHub: creating an account, making a repository, uploading your project files
- GitHub Pages: hosting your website for FREE on a real domain instantly
- Netlify: alternative free hosting with drag-and-drop deployment

FINAL PROJECT — 4-Page Live Website

Expand your Week 3 landing page into a complete 4-page website, then host it live on the internet.

Required File Structure

YourProject/	
index.html	← Home page
about.html	← About page
services.html	← Services page
contact.html	← Contact page
style.css	← One CSS file for ALL pages
script.js	← JavaScript (if needed)
images/	← All your images

Page 1 — Home (index.html)

- Your complete Week 3 landing page — fully polished and improved
- Fix any issues from Week 3 feedback
- All 7 sections from Week 3 must still be present
- Navigation must link to About, Services, and Contact pages

Page 2 — About (about.html)

- Detailed about page — expand on your business story
- Business history: when was it founded and why?
- Team section: at least 2 fake team members with name, title, photo placeholder
- Mission statement: what does this business stand for?
- Values section: 3-4 core values with icons

Page 3 — Services (services.html)

- Full services page — more detailed than the cards on Home page
- Each service gets its own full section with: description, what is included, price
- Minimum 3 services fully described
- Pricing table or cards showing different packages
- CTA button below each service: 'Book Now' or 'Contact Us'

Page 4 — Contact (contact.html)

- Full-width contact form: Name, Email, Phone, Subject, Message + Submit button
- Business location information (even if fictional): address, city, Pakistan
- Business hours: Monday to Saturday, 9 AM to 6 PM (fictional)
- Phone number and email address displayed clearly
- Optional: embed a Google Maps iframe showing any Pakistani city location

Technical Requirements — ALL Must Be Met

- Same navigation bar on every page — active link highlighted for current page
- Same footer on every page — consistent branding throughout
- No broken links — every navigation link works correctly
- Fully responsive on desktop (1200px) AND mobile (375px) — all 4 pages
- Google PageSpeed Insights score must be 60 or above on mobile
- All pages must have proper <title> tags showing the page name
- Website must be live and accessible via a public URL

HOW TO HOST FOR FREE — Step by Step

Method A: GitHub Pages (Recommended)

- Step 1: Create a free account at github.com
- Step 2: Click '+' → 'New repository'
- Step 3: Name it exactly: yourusername.github.io (replace 'yourusername' with your GitHub username)
- Step 4: Set repository to 'Public'
- Step 5: Click 'uploading an existing file' → drag all your project files → click 'Commit changes'
- Step 6: Go to Settings → Pages → Source: Deploy from branch → branch: main → Save
- Step 7: Wait 2-3 minutes → your site is live at: https://yourusername.github.io

Example: if your GitHub username is 'aneeszafar', your site will be at: <https://aneeszafar.github.io>

Method B: Netlify (Even Easier)

- Step 1: Go to netlify.com → sign up free
- Step 2: Click 'Add new site' → 'Deploy manually'
- Step 3: Drag your entire project folder into the upload area
- Step 4: Wait 30 seconds → your site is live at a random Netlify URL
- Step 5: You can rename it to: `yourname.netlify.app` in Site Settings

How to Check PageSpeed Score

- Go to: pagespeed.web.dev
- Paste your live website URL and click 'Analyze'
- Wait for results — screenshot the score showing both Mobile and Desktop
- Aim for 60+ on mobile — above 70 is very good for a first project

SUBMISSION DETAILS

Required 1: GitHub repository link (github.com/yourusername/yourrepo)

Required 2: Live website link (yourusername.github.io OR yourname.netlify.app)

Required 3: Google Drive link to walkthrough video (3-5 minutes)

Required 4: Screenshot of PageSpeed Insights score (mobile + desktop)

Where: Google Classroom → Week 4 Final Project → paste all links in comments

Deadline: Final day of internship program

Late policy: 10 points deducted per day — no extensions except genuine emergencies

Walkthrough Video Requirements

- Length: 3 to 5 minutes exactly
- Show all 4 pages of your website and explain each section
- Show your website on mobile view (Chrome DevTools)
- Show your Google PageSpeed score
- Speak clearly — explain your design decisions like you are presenting to a client
- Screen recording with voice is fine — no need to show your face
- Tools: Loom (loom.com — free) or OBS Studio (free) or any phone screen recorder
- Upload to Google Drive → Share → 'Anyone with link can view'

FINAL ASSESSMENT & GRADING

- All 4 pages complete, linked, and working correctly **[35 pts]**

- Fully responsive on all screen sizes across all 4 pages **[25 pts]**
- Website is live and publicly accessible via URL **[15 pts]**
- Walkthrough video — clear, covers all pages, professional delivery **[15 pts]**
- Submitted on time with all required links **[10 pts]**

TOTAL: 100 points | PASS MARK: 70/100

Certificate issued within 3-5 business days of passing assessment.

Students scoring 80% or above will receive a personal LinkedIn recommendation from Anees Zafar, CEO of TechSphere PK, and may be invited for paid web development projects.

What Comes Next After This Internship

- Add your live website link to your LinkedIn profile immediately
- Share it on Instagram and tag @techsphere_pk — we will repost the best ones
- Start taking Shopify and web design orders on Fiverr — starting from \$35
- Continue learning: JavaScript frameworks like React (1-2 months after mastering basics)
- WordPress: learn it for client sites that need a CMS — huge demand in Pakistan
- Build 2-3 more projects to grow your portfolio before applying for jobs or freelance

Congratulations on completing TechSphere PK Web Development Internship Batch 3!

You now know how to build real websites from scratch. This is a skill that can earn you money immediately. Use it.
